

Seunghoon Shin

SOFTWARE ENGINEER · BACK-END

Seoul, Republic of Korea

☎ (+82) 10-5577-5814 | ✉ newinh90@gmail.com | 🏠 newinh.me | 📱 newinh | 🌐 newinh | 📺 newinh

Summary

1+ year experience in back-end development. Experienced embedded, Android, iOS development as a beginner, recently worked on project related to collecting data in fashion AI company.

Open culture of IT industry was so impressive that I started developing software. As I got help and inspired, I want to be an engineer who can help. Main skills are Python, flask, MySQL now, but I'm ready to challenge other technical skills and accomplish projects.

Skills

Programming	Python, Swift, Java
Frameworks	Flask, Scrapy, pandas
Infrastructures	AWS, Docker, MySQL
Languages	Korea(native), English(Business)

Work Experience

Omnious. Co., Ltd.

Seoul, S.Korea

BACK-END ENGINEER

Nov. 2017 -

Labeling Tool

- Maintained back-end of in-house web application having 50+ active users for collecting fashion data to train AI model.
 - AWS, Docker, CircleCI, Jenkins, Rancher
- Designed RESTful HTTP API, developed server serving them.
 - Python, flask, Swagger, NGINX, uWSGI
- Established relation of domain model, designed database schema.
 - DDD, MySQL
- Built HTTP access logging system and pipeline to store it.
 - fluntd, fluent-bit
- Introduced unit testing, style guide of codebase.

Data Delivery

- Exported collected data based on a rule of extraction to train AI model and processed in a form that is easy to train.
- Established the rule of extraction for data having combined label, developed a program that parses documented the rule.
- Automated process from data extraction to data processing, developed CLI to access automated data transfer system.
- pandas, Celery

Crawler

- Implemented 20+ web crawler for collecting fashion image, developed a scheduling tool for management.
- Built serverless pipeline that stores crawled data in a repository.
- Scrapy, ScrapingHub, AWS, Zappa

LayGen Inc.

Gyeonggi-do, S.Korea

SOFTWARE DEVELOPER INTERN

Aug. 2017 - Sep. 2017

- Participated to manufacturing operating module for a prototype of 3D printer and developed software control the module.
- Developed GUI so that hardware engineer can test controlling each part of 3D printer.
- Python, PyQt, Raspberry Pi, Arduino

LINE Corp.

Gyeonggi-do, S.Korea, S.Korea

SOFTWARE DEVELOPER INTERN

Apr. 2017 - May. 2017

- Prototyped iOS application "Targeted Video" emphasizing object user want in video.
- Used technique of contour extraction, image segmentation and stabilization.
- Implemented video editing function that cuts or pastes object user selected.
- Swift, OpenCV

UXEnterprise

SOFTWARE DEVELOPER INTERN

Seoul, S.Korea

Aug. 2016 - Sep. 2016

- Prototyped Android application viewing Femail biorhythm.
- Implemented connection with a measuring device using Bluetooth.
- *Java, Android*

Education

BoostCamp, Connect Foundation education program

Seoul, S.Korea

iOS COURSE

Jan. 2017 - Feb. 2017

- Developed iOS Application, "Color to Sound, Sound to Color! ChromaTone"
 - <https://github.com/newinh/ChromaTone>

Konkuk University

Seoul, S.Korea

B.S. IN ELECTRONICS

Mar. 2009 - Feb. 2016

- Graduation piece, "IOT Door Lock using Wireless Home Router & Android Device"
